## **LISTING OF CLAIMS:**

This listing of claims will replace all prior versions and listings of claims in the application:

Claims 1 through 9 (Cancelled).

Claim 10. (New) A method for processing a textile piece, comprising: placing the textile piece on a non-porous mask having a shape corresponding to at least a portion of the textile piece;

moving a pick-up head above the textile piece, said pick-up head having a shape corresponding to said shape of said non-porous mask; and

drawing suction through said pick-up head so that the textile piece is held between said non-porous mask and said pick-up head.

- Claim 11. (New) The method as in claim 10, further comprising moving said pick-up head to carry the textile piece and said non-porous mask to a processing area.
- Claim 12. (New) The method as in claim 11, further comprising moving said pick-up head to carry the textile piece and said non-porous mask to an arrival area.
- Claim 13. (New) The method as in claim 11, further comprising processing a processed portion of the textile piece while a non-processed portion of the textile piece is held between said non-porous mask and said pick-up head.
- Claim 14. (New) The method as in claim 13, wherein said non-processed portion is an internal surface of the textile piece and said processed portion is a marginal surface surrounding at least a portion of said internal surface.
- Claim 15. (New) The method as in claim 13, wherein said processed portion comprises a central part of the textile piece.

- Claim 16. (New) The method as in claim 13, wherein said processing comprises cutting the textile piece.
- Claim 17. (New) A device for processing a porous textile piece, comprising: a non-porous mask having a shape corresponding to at least a portion of the textile piece; and

a pick-up head having a suction plate, said suction plate having a shape corresponding to said shape of said non-porous mask, wherein suction applied by said suction plate sandwiches the textile piece between said non-porous mask and said suction plate.

- Claim 18. (New) The device as in claim 17, further comprising a device for moving said pick-up head while the textile piece is sandwiched between said non-porous mask and said suction plate.
- Claim 19. (New) The device as in claim 18, wherein said device for moving said pick-up head comprises a multi-axis robot.
- Claim 20. (New) The device as in claim 18, further comprising a processing area for processing the textile piece while the textile piece is sandwiched between said non-porous mask and said suction plate.
- Claim 21. (New) The device as in claim 20, further comprising a departure area for picking up the textile piece before processing at said processing area and an arrival area for placing the textile piece after processing at said processing area.
- Claim 22. (New) The device as in claim 17, wherein said suction plate comprises two separated parts.
